SUMMARY

FullStack developer with background in designing and developing applications of large and small scales. Skilled in team collaboration, communication, system scalability, containerization and security. Proficient in Node.js, React, Next.js, AWS ECS, EKS and CI/CD.

SKILLS

JavaScript, Node.js, Next.js, Express.js, Python, TypeScript, React, PostgreSQL, AWS, EC2, GCP, Heroku
MongoDB, RESTfull API, Redis, unit-tests, jest, webpack, babel, Redux, ES6, ES5, HTML5, CSS
Docker, JWT, Kubernetes, CI/CD, GitHub, memchaed, serverless, Terraform, DNS, ingress, distributed systems, Jenkins, Firewall, Load Balance

EXPERIENCE

Software Engineer III

Avaya

July 2021 – January 2023, Vancouver, BC

- Created and implemented RESTful APIs, session management, middleware components, OAuth, and API keys in a Microservice architecture pattern to improve usability, security, and fault tolerance of the system
- Developed UI in React, utilizing state management with Redux and Hooks, Cookies and using CSS libraries for building responsive and user friendly interfaces
- Implemented CI/CD pipelines using Jenkins and GitHub to automate the continuous integration and deployment processes
- Created automate provisioning GCP using Terraform and cloud build to create Kubernetes, VPC CIDR and subnets, Firewall policies and peering with third party networks to optimize time and cost of creating new infrastructure on cloud

Software Engineer

Living Sky Technologies

August 2019 – July 2021, Vancouver, BC

- Containerized Node.js applications using Docker and host on AWS using EKS, S3, SNS and utilizing NoSQL DynamoDB to improve scalability and stability across different environments
- Developed the UI using server-side rendering (SSR) Next.js, React.js and CSS libraries to engage more users, fast initial page load and improve SEO
- Implemented asynchronous communication, message queues and AWS Lambda Serverless framework to enable integration and decoupling of services at an event-driven architecture system
- Published private packages to encapsulate the code base and maintain security
- Generated one-way tokens, set up JSON Web Tokens (JWT), and implemented verification system using hash tables and private keys to ensure the security of the system

Web Service Developer

Simon Fraser University

October 2017 – July 2019, Burnaby, BC

- Enabled secure connectivity between clients and applications, allowing clients to securely access and interact with the application's features and functionalities
- Collaborated closely with the stakeholder and clients to ensure efficient communication and addressing the business requirements
- Developed React.js and node.js service, dialectical map, to engage users and professors and increase availability and reliability to the system
- Configured GitHub webhooks to trigger automated builds and deployments whenever changes are pushed to the repository to create CI/CD pipeline

IT Consultant

HSBC Bank of Canada

September 2016 – April 2017, Vancouver, BC

- Contributed as a team member in Scrum agile development with a team of 20 developers to develop a project for validating daily transactions as a batch process.
- Utilized embedded SQL and command line IBM iSeries to develop the back-end that addressed business requirements.
- Developed a system using Java to efficiently verify millions of transactions with minimum time consumption as the responsible team member for this functionality.

Web Developer – Co-op

BC Liquor Distribution Branch

October 2015 – April 2016, Vancouver, BC

- Developed an application using Ruby on Rails to update thousands of records on a daily basis through a SOAP server
- Designed user interface applications using JavaScript ES5, CSS and HTML5 to provide a user-friendly experience.

EDUCATION

Bachelor of Science in Computer Science

Simon Fraser University • Burnaby, BC
